Report on Composting Demonstration

14th August, 2025

A Composting Demonstration was organized in our campus to create awareness among students about waste management and the importance of eco-friendly practices. The main objective was to encourage sustainable habits and to train students in converting biodegradable waste into useful manure.

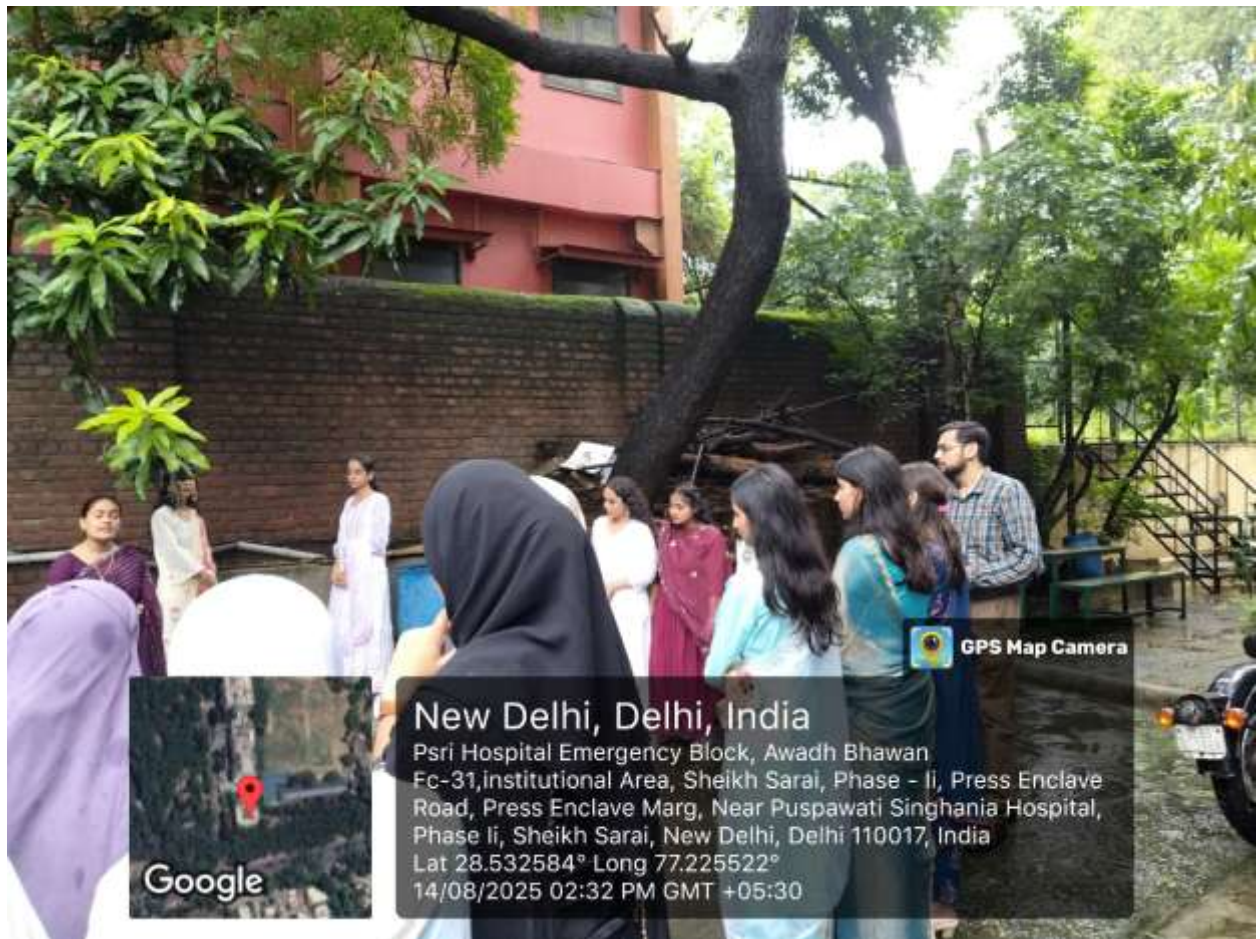

As part of the demonstration, a compost pit/bin was already constructed in the Institute premises. Teachers explained the step-by-step process of composting, including the segregation of wet and dry waste, layering of organic matter, and maintaining moisture and aeration. Students were actively involved in the preparation and were guided on the proper disposal of kitchen and garden waste into the pit.

Furthermore, a training session was conducted to teach students about the uses of compost. They were informed that the compost prepared from biodegradable waste is a natural fertilizer which improves soil fertility, supports plant growth, and reduces dependency on chemical fertilizers. The activity not only gave students hands-on experience but also instilled in them the values of responsibility towards the environment. It was a practical lesson on 3Rs – Reduce, Reuse, and Recycle, helping them understand how small steps can lead to a sustainable future.

The composting demonstration was highly successful. Students showed enthusiasm and pledged to adopt composting at home and in the Institute. Such initiatives are vital to promote environmental conservation and to make our campus greener and healthier.
