REPORT ON BOTTLE ART ACTIVITY

Day-2

Date: 23 July 2026

Venue: Institute of Vocational Studies

A workshop on Clay Art on Glass Bottle was organized in our institution by Pidilite to promote creativity, artistic skills, and the concept of recycling waste materials. The workshop aimed to teach participants how to transform ordinary glass bottles into beautiful decorative items using clay.

The Instructor first explained the materials required, such as glass bottles, air-dry clay, sculpting tools, acrylic paints, brushes, glue, and varnish. Participants learned how to apply clay evenly, create different designs such as flowers, leaves, and traditional patterns, and finally paint and decorate the finished artwork.

The workshop was highly interactive and provided hands-on experience to all participants. It enhanced creativity, patience, fine motor skills, and artistic expression. It also encouraged the practice of upcycling by converting waste glass bottles into attractive home décor items.

Overall, the workshop was informative, enjoyable, and inspiring. It motivated participants to explore eco-friendly art and develop their craft skills through creative learning.
