

Report on Nukkad Natak on the Topic “Energy Conservation”

On 15-12-25 A Nukkad Natak (street play) on the topic “Energy Conservation” was successfully conducted by our Eco-club D.EL.Ed team to create awareness among the public about the importance of saving energy and using resources responsibly. The event aimed to educate people in a simple, engaging, and impactful manner by using drama, dialogue, and live interaction.

The Nukkad Natak was organized near the college gate, which helped in attracting a large audience including students, local residents, and passers-by. The play began with a loud and energetic introduction to gather attention. Through powerful expressions and relatable situations, the performers highlighted how careless use of electricity and natural resources is leading to serious environmental problems such as global warming, depletion of fossil fuels, and climate change.

The storyline revolved around daily life scenarios where people waste electricity by leaving lights, fans, and electronic appliances switched on unnecessarily. Characters portrayed common habits such as overuse of air conditioners, misuse of fuel, and ignorance towards renewable energy sources. The play also showed the consequences of these actions, including rising electricity bills, power shortages, and environmental degradation. This helped the audience connect easily with the message.

One of the most impactful parts of the Nukkad Natak was the use of slogans and rhythmic chants like “Bijli Bachao, Bhavishya Bachao” and “Urja Sanrakshan, Desh Ka Rakshan”. These slogans encouraged audience participation and made the message memorable. The performers also emphasized simple energy-saving practices such as switching off lights when not in use, using LED bulbs, conserving fuel, and adopting renewable energy sources like solar power.

The play concluded with a strong message about individual responsibility. It stressed that energy conservation is not only the duty of the government but also of every citizen. Small steps taken by individuals can collectively make a big difference in protecting the environment and ensuring a sustainable future for coming generations.

The Nukkad Natak received a positive response from the audience. Many people appreciated the effort and expressed their willingness to adopt energy-saving habits in their daily lives. The interactive nature of the performance helped in effectively communicating

the message without the need for formal teaching. This activity was conducted under the guidance of Institute of vocational studies Principal Dr.Mandira Gupta. Activity was organized by IVS Ms.Pratibha Sharma and Eco-club in-charge Ms. Nahid Raees.

In conclusion, the Nukkad Natak on Energy Conservation was a meaningful and successful initiative. It served as an effective medium to spread awareness, inspire action, and promote responsible use of energy resources. Such plays play an important role in social awareness and should be encouraged to build an environmentally conscious society.
